

CORE

Pharmacology

(3 exams, 50 items each + 100-item Build Your Own)

The Pharmacology-focused exam will provide a valid and reliable assessment of the students' clinical judgment skills in providing safe and effective care when helping clients who are in need of pharmacotherapeutics. Safety is the central theme with emphasis on all aspects of the plan of care to include dosage calculation, lifespan, polypharmacy, and more. This exam is well suited for any level of the curriculum.

Fundamentals

(3 exams, 50 items each + 100-item Build Your Own)

According to research done by the NCSBN, the concepts learned in fundamentals are the most important to the practice of a new nurse. It is for this reason that the NurseThink® Fundamentals-focused exam series assesses the student's ability to recognize cues and take action regardless of the context of the client scenario.

Women's Health

(3 exams, 50 items each + 100-item Build Your Own)

These exams focus on the needs of women across the lifespan. From prepubescence to maternal needs and older adulthood, we assess the students' clinical judgment abilities while addressing concepts as they apply to the care of the woman.

Pediatrics

(3 exams, 50 items each + 100-item Build Your Own)

Addressing the needs of the fetus through early adulthood is the emphasis of the NurseThink® Pediatrics exam series. Students will receive questions covering multiple competencies, content, and concepts in order to effectively assess their readiness to provide care in pediatrics.

Mental Health

(3 exams, 50 items each + 100-item Build Your Own)

Psychiatric needs of clients can arise at any point when nurses are providing care. Across the lifespan and across the healthcare industry, mental health concerns are a focus of nursing. This exam emphasizes the current state of mental health care in that the learner must be ready regardless of client background or setting.

Community Health

(3 exams, 50 items each + 100-item Build Your Own)

The work of the nurse, regardless of specialty, requires that there be a solid understanding of needs of the client outside of the healthcare facility. The NurseThink® Community Health exam covers all aspects of the community to include relevant public health concerns as well. Assessment data from these exams help improve curricular integration of public health principles at all levels.

Medical Surgical I

(3 exams, 75 items each + 100-item Build Your Own)

The Medical Surgical I-focused exams provide information on learner readiness for all areas of adult health. These exams are built with a context and safety emphasis to align with the focus of the new NCLEX-RN® and help to identify one's readiness for the complex needs of today's client.

Readiness Exam

(3 exams, 100 items each)

Assessment of clinical judgment ability in context is the whole focus of the NCLEX-RN® because of the need for a valid and reliable evaluation of practice readiness. Just the same, the NurseThink® Readiness Exam is designed to not only predict readiness for NCLEX-RN® but the readiness for practice as well. This clinical-based assessment provides the student and faculty with high-quality data on how best to develop a culminating lesson plan for both the NCLEX-RN® and preparation for that first job.

COMPREHENSIVE

Health Assessment

(3 exams, 50 items each + 100-item Build Your Own)

Recognizing cues for focused assessment is the foundation for the clinical judgment model used by the NCSEBN. This model is the focus of the NurseThink® Health Assessment exam. Emphasis is placed on problem solving during the assessment process and identifying priorities when there is a change or trend that is most concerning.

Nutrition

(3 exams, 50 items each + 100-item Build Your Own)

Every nurse needs to be able to apply clinical judgment skills to address the nutritional needs of the client. Using the applying and analyzing levels of Bloom's Revised Taxonomy, the Nutrition Clinical Judgment exam assesses the readiness of the student to help clients across the lifespan and the healthcare continuum with all aspects of nutritional concepts and needs.

Leadership

(3 exams, 50 items each + 100-item Build Your Own)

Being a leader and manager of care is an essential function of all nurses. The Leadership exam focuses on the generalist nurse using clinical judgment, while engaging in everything from conflict resolution to delegation to interprofessional collaboration.

Medical Surgical II

(3 exams, 75 items each + 100-item Build Your Own)

The Medical Surgical II-focused exams build upon the Medical Surgical I exams to provide even more information on learner readiness for all areas of adult health. These exams are built with a context and safety emphasis to align with the focus of the new NCLEX-RN® and help to identify one's readiness for the complex needs of today's client.

Pathophysiology

(3 exams, 50 items each + 100-item Build Your Own)

Understanding why the client has needs related to concepts across the lifespan is an essential part of clinical judgment. With a complete focus on nursing care, this exam provides data on how learners are synthesizing the rationale for many of the actions taken by the nurse.

Maternal-Child

(3 exams, 50 items each + 100-item Build Your Own)

Building on the Pediatrics and Women's Health exams, emphasis is placed on the needs of the maternity client, conception, fetus, and subsequent pediatrics. This high-level exam is ideal for programs where the two classes are combined.

Research

(3 exams, 50 items each + 100-item Build Your Own)

Understanding that the application of evidence-based practice is a vital aspect of the work of the novice nurse, the Research exam will focus on integration in the nurses' workflow. There is an emphasis on the application of clinical judgment as it relates to using research and related principles in practice. Concepts are assessed through test items that demonstrate the principle in the context of the workflow of the generalist nurse.
